

## **BATHING**

CHANGES WITH DEMENTIA	APPROACHES	APPROACHES
Loss of ability to judge height or depth of tub,	Client Centered Strategies:	Environmental Centered Strategies:
or amount of water in tub.	Record bath day on calendar as a reminder.	Turn down temperature of water heater to 120°F to avoid burns.
Fear of bubbles or air jets.	Separate the bath from the shampoo. For some, a weekly shampoo at the hair salon	Try using a coloured bathmat to contrast
Inability to recognize bathroom, tub, shampoo, soap.	works better.	against white bathtub to give a person a sense of depth.
Inability to remember how to turn taps on or use soap.	Remove or cover mirror surfaces if reflection is upsetting to the person.	Set up a positive and stress-free environment, - play music
Attitude change from the past and no longer recognizes that bathing is important.	Have person trial using an electric shaver rather than manually shaving.	<ul> <li>use favourite aftershave or powder</li> <li>provide colourful soft terry robes</li> </ul>
Inability to remember when last bath was taken.	Trial a child's toothbrush and children's toothpaste which could be swallowed.	and towels - warm water, warm room, warm towels.
Inability to understand verbal or non-verbal directions and therefore may become resistive.	Post step by step instructions on the bathroom mirror for person to follow.  Give person something to hold onto for	Keep soap, washcloths, shampoo, clothes, etc. within easy reach. Simplify the environment and label drawers.
Inability to perform some or all of motor tasks involved in each step, e.g. opening toothpaste tube, putting paste on brush, putting brush to mouth, etc.	distraction if necessary, e.g., facecloth, soap, hand towel or laminated photographs.  For fear of the tub or shower, substitute a stand-up bath at the sink or bed bath.	Consider safety adaptations to bathroom including rubber-backed bathmat, tub guard, shower bench, wall bars, hand-held shower.
Embarrassment regarding nakedness.	Make sure it's the right <b>type</b> (bath/shower), the right <b>time</b> (morning vs. evening), and the	Provide a chair to sit on in the bathroom to make drying and dressing easier.
Inability to get to bathroom or enter tub or shower stall.	right <b>caregiver</b> (young vs. older, etc.)	Remove all hazardous or dangerous materials, e.g., razor, medication, cleaners, plants.
Unable to interpret reflection in mirror and mistakenly believing another person is	Caregiver Centered Strategies: Lay out all supplies ahead of time.	Remove sink stoppers to avoid a flood if water left on.
present.	Provide appropriate level of cueing: verbal prompts, non-verbal prompts, demonstration	Utilize beauty or barber shop for hair care – most people enjoy being pampered. There
Inability to appreciate the need for assistance or recognize person attempting to assist.	or physical guidance.	are professionals who will do hair in a person's

Fixed, false belief that caregiver is trying to harm them when assisting with undressing.

Depression (self-neglect, not sleeping, loss of appetite, loss of interest, low mood) causing resistance to care.

Simplify verbal instructions to one-step commands: i.e., turn on tap, grab soap, wash hands, etc.

Offer choices, e.g., whether person would like to bathe before or after breakfast.

Communicate: "It's time for your bath – the water is drawn. I will help you" or "I'd like to help you freshen up before your family comes".

Maintain a routine the person was used to before becoming ill; consider lifelong habits – time, preference for bath or shower, frequency of bathing.

Remove clothing from sight once taken off. Show robe and slippers to indicate undressing to begin.

Provide privacy by pinning towel around shoulders with clothes peg or allow the person to bathe wearing a T-shirt.

Assist in/out of tub one step at a time.

A facecloth soaked in mouthwash may be the only accepted oral care at a specific time, or a sponge swab.

Try offering a reward, such as favourite food/treat, a drive in the car following bath.

Have physician write an "order" on prescription pad and show weekly/daily to client.

own home.

If person is very resistive to bathing in home setting, bath programs are available at some adult day programs or other places in the community.

Only provide as much assistance as is necessary in order not to create excess disability.
