

GREATER CAMPBELL RIVER

Local Health Area Profile

Greater Campbell River Local Health Area (LHA) is one of 14 LHAs in Island Health and is located in Island Health's North Island Health Service Delivery Area (HSDA). The Greater Campbell River LHA is approximately 12,975 square kilometres. It sits at the eastern side of the North Island HSDA, and is bordered by four LHAs: Comox Valley, Alberni-Clayoquot, Vancouver Island West and Vancouver Island North. Greater Campbell River is served by Highway 19 and Highway 28. It is approximately a 45 minute drive from Courtenay and two and a half hours from Port McNeill. Greater Campbell River has approximately 10 bus routes, as well as a HandyDART service. There is also BC Ferries service from Campbell River to Quadra Island.

July 2018

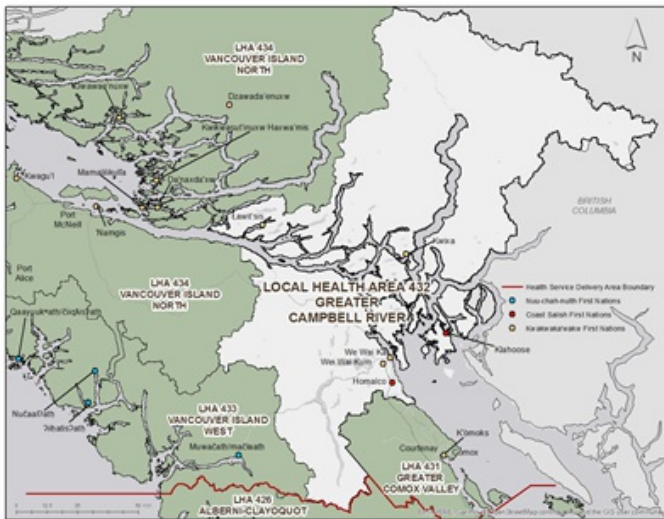

An accompanying Interpretation Guide has been created to assist with the interpretation of indicators.

The Interpretation Guide should be read with the profiles.

These profiles are not intended to be used for detailed planning or analysis. As they are updated on an annual basis, there may be more current data available. If you are intending to use these profiles for health planning purposes, or if you have questions or notice a discrepancy, please contact: Maritia Gully (Maritia.Gully@viha.ca).

Population and Demographics

As of 2017, the Greater Campbell River LHA represented 5.6% (44,269 people) of Island Health's total population of 793,180. According to the 2016 Census, 12.5% of people living in the Greater Campbell River identified themselves as Aboriginal compared to 7.6% across Island Health and 5.9% in BC. Additionally, 4.4% of people living in the Greater Campbell River area identified themselves as a visible minority, compared to 9.6% across Island Health and 30.3% in BC.

On average, the population of Greater Campbell River is slightly younger than that of Island Health but older than BC, with an average age of 44.5 years. The 75+ age group makes up around 8.2% of the population which is lower than Island Health (10%) but higher than BC (8%). Currently, the largest population group is between the ages of 45 and 64 years.

The Greater Campbell River LHA population is expected to increase by 5.68% to 46,937 over the next 10 years; this is lower than the growth expected for Island Health (8.7%) and BC (10.8%). The greatest growth is expected in the 75+ age group which is expected to more than double (from 3,621 to 9,327) over the next 20 years. The 65-74 year age group is expected to increase over the short term and then decline while the 45-64 age group is expected to decrease over the short term and then rebound slightly. The younger age groups (0-19 and 20-44 years) are expected to remain relatively stable with very small increases in the longer term. See the Population and Demographics summary on page 10 for more information.

Average Age (2017)

Estimated Total Population - Greater Campbell River

Population Pyramid - 2017 - Greater Campbell River

Estimated Population Change - Greater Campbell River

Determinants of Health

Access to adequate income, affordable housing, healthy food, education, healthy environments and recreational opportunities influence our health and wellbeing. People who are less well-off generally have poorer health and shorter life expectancies than those who are well-off. By working upstream to improve the conditions in which all people live, work and play, we can decrease these gaps and improve the health and wellbeing of our population.

Income and Employment

The median household income for Greater Campbell River was \$62,946 in 2016 lower than the BC median household income of \$69,979 and Island Health's \$65,735. The proportion of persons who are members of a low income household is higher among children, youth and adults compared to Island Health and BC, but the proportion of low income seniors is similar to Island Health overall and less than BC. Compared to Island Health and BC, unemployment rates in Greater Campbell River are higher (see page 11).

Percent of Population with Low Income in 2015 based on after-tax low-income measure (2016 Census)

Education

High school completion rates in the Greater Campbell River LHA are higher than the rates for Island Health but lower than BC. Also, according to the 2016 Census, compared to Island Health and BC, a lower proportion of the Greater Campbell River adult population have completed post-secondary education.

Population Aged 25 to 64 with Post-Secondary Certificate, Diploma or Degree (%)

High School Completion Rate within 6 years of Grade 8 Enrollment

Determinants of Health

Housing

One way to measure affordability of housing is to look at how much of a household's income is spent on shelter. The proportion is lower for the Greater Campbell River LHA for home owners, and a lower percentage of renters in Greater Campbell River spend more than 30% of their income on shelter than in the rest of BC. There are fewer crowded family households in the Greater Campbell River LHA compared to Island Health and BC, and the proportion of households in need of major repairs (e.g., defective electrical wiring) is higher than Island Health and BC rates (see page 11).

Selected Household Indicators

Early Childhood Development and Determinants of Child and Youth Health

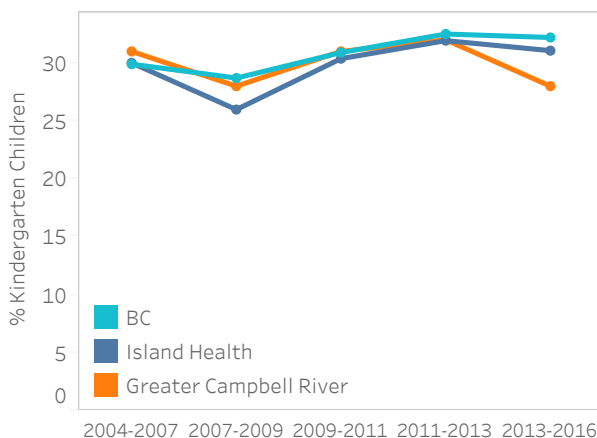

Creating supportive and healthy environments in an equitable way so that all children and youth can grow and thrive is critical to the health of the population. This includes supporting mothers during the pre- and post-natal period, supporting families during early development years, and supporting children and youth to grow, learn, and transition into adulthood.

Greater Campbell River has a lower percentage of lone-parent families in comparison to BC, but higher than Island Health; however, lone-parent families in this LHA also have a lower median household income than lone-parent families in Island Health and BC.

Median Household and Lone-Parent Income, and Percentage of Lone-Parent Families (2016 Census)

Early Childhood Development Instrument (EDI) Percent of Preschool Children Vulnerable on EDI: Vulnerable on >1 Domains

The Early Development Instrument (EDI) is used to measure vulnerability in kindergarten children across five domains (social, physical, emotional, language, and communication). Increases in the EDI rate are a negative indicator of child health and decreases are a positive indicator. For Island Health overall, vulnerability has increased between 2007/2009 and 2014/2016. Greater Campbell River had lower levels of vulnerability as compared to Island Health and BC and this rate has decreased in the last few waves.

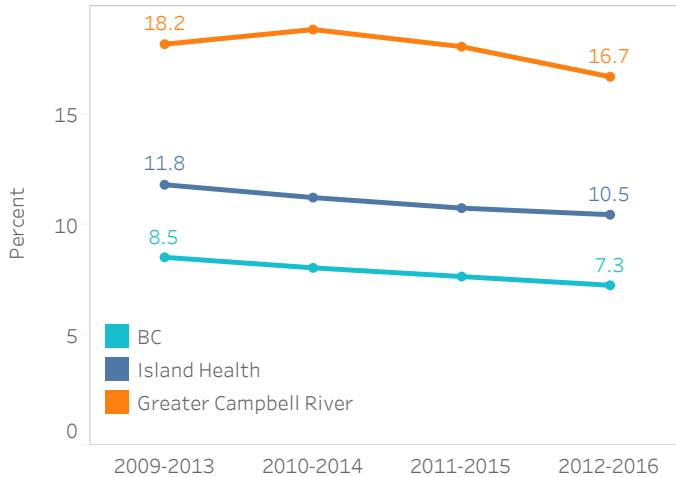

Determinants of Health

Mothers' smoking during pregnancy has been shown to have negative effects for both mother and the baby. Rates of smoking during pregnancy have been decreasing over the past 8 years; however, across Island Health overall, rates have been much higher than for BC. In the Greater Campbell River LHA, a much higher percentage of mothers smoked during pregnancy.

Rates of children and youth in care have decreased over the past 4 years; however, across Island Health overall, rates have been much higher than for BC. The rate of children and youth in care is higher in the Greater Campbell River LHA than in Island Health and BC. See the Determinants of Health summary on page 12 for more information.

Percent of Pregnant Women who Reported Smoking at Any Time During Current Pregnancy (5 year aggregate)

Children and Youth in Care per 1,000 Children and Youth

Healthy Behaviours and Built Environment

Alcohol Consumption (litres of absolute alcohol sold per person, 1L=58 standard drinks)

Preference for healthy behaviours such as healthy eating, exercise, reduction of smoking and alcohol consumption, and social connections contribute to a healthier life. Many of the healthy behaviour indicators are available through the Canadian Community Health Survey (CCHS) but the data is not available at the LHA level. Among LHA-level available data, substance use in the Greater Campbell River, particularly alcohol consumption per capita, is higher than the Island Health and BC average. The rate of alcohol-related hospitalizations is lower than the Island Health rate but higher than the BC rate. The rate of tobacco and illicit-drug related hospitalizations is lower in the Greater Campbell River LHA than in Island Health and BC.

Among those who are employed, a lower percentage of the population in Greater Campbell River reports using active modes of transportation (walking, cycling, public transit) to get to work. See the Determinants of Health summary on pages 11 and 12 for more information.

Employed Population Aged 15 and Over Walking, Biking or Busing to Work (%)

Health Status

The health status of the population includes measures such as life expectancy, infant mortality, prevalence of chronic disease, mortality and premature mortality.

Birth Statistics

The overall birth rate for the Greater Campbell River LHA is lower than BC but higher than Island Health; however, there are proportionately fewer births to older (35 years and over) mothers and more births to younger mothers (under 20 years). While the rate of low birth weight babies is similar to Island Health, and lower than BC, the rate of pre-term births (those born at less than 37 weeks) is slightly higher.

Birth Statistics
Live Births per 1,000 Population
(1992-1996 to 2011-2015)

Mortality Statistics

Mortality rates have decreased steadily over the last 5 years. The age-standardized all-cause mortality rate for the Greater Campbell River LHA is higher than the Island Health and BC rates. See the Health Status summary on page 14 for cause-specific mortality rates.

*It is important to note that caution should be exercised when dealing with a small number of cases as an increase or decrease may indicate random variation rather than a significant change in rates.

Mortality (Age Standardized Rate per 10,000)

Health Status

Potential years of life lost (PYLL), is a measure of premature mortality (an estimate of the average years a person would have lived if he or she had not died prematurely). The PYLL in Greater Campbell River for suicides, lung/tracheal cancers, diseases of the respiratory system, diseases of the digestive systems, cerebrovascular, and chronic lower respiratory diseases are higher than the BC and Island Health PYLL. A complete list of PYLL by cause can be found on page 15.

Life expectancy has been increasing over the last few decades; however, the Greater Campbell River population tend to have a shorter life expectancy; for both males and females the life expectancy is shorter than that for both Island Health and BC.

Chronic Disease

Chronic disease prevalence rates tend to be higher for the Greater Campbell River LHA in comparison to Island Health and BC rates. See the Health Status summary on page 13 for more information.

Life Expectancy*

Chronic Disease Age Standardized Prevalence in 2017 Per 1,000 Individuals

	BC	Island Health	Greater Campbell River
Heart Failure	19.9	18.1	24.3
Alzheimer's Disease and Other Dementia	20.7	21.9	20.0
Chronic Kidney Disease	22.5	21.7	22.9
Chronic Obstructive Pulmonary Disease	62.0	62.4	84.5
Ischemic Heart Disease	71.5	62.2	81.0
Diabetes	80.9	70.1	83.3
Osteoarthritis	86.7	92.7	111.2
Asthma	122.3	129.2	144.4
Hypertension	226.4	214.0	226.3
Depression	245.5	275.4	275.3
Mood & Anxiety Disorders	300.1	338.4	347.0

Health Service Use

Access to health services also determines health service utilization. Access to primary care services plays an important role in the use of emergency department and inpatient services. The population attached to physicians at the practice level is calculated by the Ministry of Health and indicates the percentage of population who have a regular physician or regular physician practice. A similar percentage of the Greater Campbell River LHA population has a physician at the practice level.

There is a higher rate of home care visits for the 75 years and over population for Greater Campbell River compared to Island Health, but a lower rate of home support hours. When we look at the number of clients among those 75 years and over, the Greater Campbell River rates are lower than Island Health's rate. See the Health Service Use summary on page 16 for more information on these topics.

Population Attached to Physician at the Practice Level (%)

Home Care Visits
Rate per 1,000 Population

Home Care and Home Support Clients

Home Support Hours
Rate per 1,000 Population

Health Service Use

The age standardized hospitalization rate (inpatient admissions) for the Greater Campbell River LHA population is higher than Island Health and BC, both overall and for the population aged 75 and over.

Hospital admission rates for Ambulatory Care Sensitive Conditions (ASCS) - conditions that can be treated in the community if services are available and would not necessarily require hospitalization - have been higher in the Greater Campbell River LHA but have decreased in the last fiscal year.

Emergency/urgent care visit rates are higher in Greater Campbell River as compared to Island Health. However, the rate of higher urgency visits is lower in Greater Campbell River. Health service usage is based on where the user resides rather than where the service is provided. See the Health Service Use summary on page 16 for more information on these topics.

Acute Care Inpatient Cases

*The Health Matrix is a way of categorizing the population into different groups based on their health service utilization patterns. These categories are mutually exclusive and add up to 100% - in other words, everyone is placed into one of the categories, going from low or no utilization to high utilization at end of life; people who may meet the criteria for more than one category would be placed into the higher utilization category - for example, someone with medium complex chronic conditions who was also living in residential care would be counted in the Frail, Living in Residential Care category.

For more information on the Health Matrix, see https://www2.gov.bc.ca/assets/gov/health/conducting-health-research/data-access/health_system_matrix_61_definitions.pdf

Age and Demographics

Median Age of Population: Census, Calendar year 2016 | Population in private households with Aboriginal Identity (%): National Household Survey, Calendar year 2016 | Population where language spoken most often at home is not English or French (%): Census, Calendar year 2016 | Visible minority population (%): National Household Survey, Calendar year 2016

Marital Status

Population aged 15 and over who are common-law (%): Census, Calendar year 2016 | Population aged 15 and over who are married (%): Census, Calendar year 2016 | Population aged 15 and over who are separated or divorced (%): Census, Calendar year 2016 | Population aged 15 and over who are single, never married (%): Census, Calendar year 2016 | Population aged 15 and over who are widowed (%): Census, Calendar year 2016

Migration and Immigrants

Immigrant population (%): National Household Survey, Calendar year 2016 | Population migrating to area in the last 5 years (%): National Household Survey, Calendar year 2016

Determinants of Health

Education

Grade 12 completion among students entering Grade 12 for the first time (%) (2yr Agg): Ministry of Education, 2014-2016 | Population aged 25 to 64 with post-secondary certificate, diploma or degree (%): National Household Survey, Calendar year ending 2016 | Students completing high school within six years of enrollment in Grade 8 (%) (2yr Agg): Ministry of Education, 2014-2016

Employment

Population aged 15 and over who are unemployed (%): National Household Survey, Calendar year 2016

Health Behaviours

Alcohol consumption (litres of absolute alcohol sold per person, 1L=58 standard drinks): AOD, Calendar Year 2016

Household

Dwellings rated as needing major repairs by renter or owner (%): National Household Survey, Calendar year ending 2016 | Lone-parent family households (% of census families with children): Census, Calendar year ending 2016 | Private households that are owner-occupied (%): National Household Survey, Calendar year ending 2016 | Private households with 5 or more persons (%): Census, Calendar year ending 2016 | Private households with multiple families (%): Census, Calendar year ending 2016

Income

Median household total income (\$): National Household Survey, Calendar year 2016 | Median lone-parent family income (\$): National Household Survey, Calendar year 2016

Data Sources

Determinants of Health

Income Inequality

Difference in median income comparing males and females aged 15 and over: National Household Survey, Calendar year ending 2016 | Households (owned) spending more than 30% of income on housing (%): National Household Survey, Calendar year ending 2016 | Households (rented) spending more than 30% of income on housing (%): National Household Survey, Calendar year ending 2016 | Low income based on after-tax low income measure (%): National Household Survey, Calendar year ending 2016 | Low income based on after-tax low-income measure, ages 18 to 64 years (%): National Household Survey, Calendar year ending 2016 | Low income based on after-tax low-income measure, ages 65 years and over (%): National Household Survey, Calendar year ending 2016 | Low income based on after-tax low-income measure, ages less than 6 years (%): National Household Survey, Calendar year ending 2016 | Low income based on after-tax low-income measure, ages less than 18 years (%): National Household Survey, Calendar year ending 2016

Income Supports

Population aged 15 and over on Employment Insurance (%): BC Statistics, 4 quarter average as of Sept 2012 2012 | Population on Income Assistance (%): BC Statistics, September 2012

Morbidity

Alcohol-related hospitalizations (age-standardized rate per 100,000): CISUR, Fiscal year ending 2014 | Illicit drug-related hospitalizations (age-standardized rate per 100,000): CISUR, Fiscal year ending 2014 | Tobacco-related hospitalizations (age-standardized rate per 100,000): CISUR, Fiscal year ending 2014

Transportation

Employed population aged 15 and over walking, biking or using to work (%): National Household Survey, Calendar year ending 2016

Child Health

Child hospitalizations - Dental Surgery (rate per 1,000 aged 0 to 14) -(2yr Agg): Ministry of Health Health Ideas, Period ending 2015-2017 | Child Hospitalizations - Injury/Poisoning (rate per 1,000 aged 0 to 14) - (2yr Agg): Ministry of Health Health Ideas, Period ending 2015-2017 | Child hospitalizations - Respiratory Dis. (rate per 1,000 aged 0 to 14) - (2yr Agg): Ministry of Health Health Ideas, Period ending 2015-2017 | Child Mental Diseases & Disorders Hospitalizations (Indirect Age Standardized rate per 1,000 aged 0-14): Ministry of Health Health Ideas, Fiscal year ending 2017 | Child/Youth Mental Diseases & Disorders Hospitalizations (Indirect Age Standardized rate per 1,000 aged 15-24): Ministry of Health Health Ideas, Fiscal year ending 2017

Crime

Motor Vehicle Theft (rate per 1,000 population): BC Statistics, Avg 2009-2011 2012 | Non-Cannabis Drug Offences (rate per 1,000 population): BC Statistics, Avg 2009-2011 2012 | Number of Serious Crimes per Police Officer: BC Statistics, Avg 2009-2011 2012 | Serious Crime (rate per 1,000 population): BC Statistics, Avg 2009-2011 2012 | Serious Violent Crime (rate per 1,000 population): BC Statistics, Avg 2009-2011 2012

Early Development

EDI: Kindergarten children rated as vulnerable for social development (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable for communication development (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable for emotional development (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable for language development (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable for physical development (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable on one or more domains (%): Early Development Instrument, Wave ending 2016 | EDI: Kindergarten children rated as vulnerable on one or more domains, excluding communication (%): Early Development Instrument, Wave ending 2016

Protecting Children and Youth

Children and Youth in Care (rate per 1,000 children aged 0 to 18): Ministry of Children and Family Development, Fiscal year ending 2016 | Children and Youth in Need of Protection (rate per 1,000 children aged 0 to 18): Ministry of Children and Family Development, End of August 2014
